## MANICALAND STATE UNIVERSITY OF APPLIED SCIENCES

## **FACULTY OF ENGINEERING**

Department of Chemical and Processing Engineering FUELS AND ENERGY

CODE: HCHE 523

SESSIONAL EXAMINATIONS
MARCH-APRIL 2021

**DURATION: 3 HOURS** 

**EXAMINER: Dr B.C. NYAMUNDA** 

## **INSTRUCTIONS**

- 1. Answer any four questions
- 2. Total marks 100

QU	ESTIO	N 1		
a) Describe the disadvantages and advantages of the following intermediate and				
	small s	scale stationary/mobile storage of hydrogen:		
	i.	Liquid form	[3]	
	ii.	Metal hydrides	[3]	
b)	b) Outline the inherent advantages of hydrogen fuels compared to combustion			
	engin	nes.	[4]	
c)	What	is a fuel cell?	[1]	
d)	With	aid of a diagram describe the operation of a polymer electrolyte	fuel cell.	
			[10]	
ΩU	ESTIO	N 2		
_			raies	
There are various forms of renewable energy. Most of these renewable energies depend in one way or another on sunlight.				
Identify the <i>merits</i> and <i>demerits</i> of the following forms of renewable energy				
	-	l energy	[15]	
1	o) Hydr	o energy	[10]	
QU	ESTIO	N 3		
á	a) Fischer–Tropsch process is a fully developed and exploited technique in			
	solving energy isues in South Africa.			
	i. Identify <b>two</b> scientists who developed this process and their country			
		origin.	[3]	
	ii. What does the Fischer–Tropsch process achieve? Give <b>two</b>		anced	
	chemical equations representing the process of producing octane and			
		heptene.	[3]	
	iii.	Name four catalysts that are used for the process.	[2]	
	iv.	What temperature and pressure are employed during the Fische	er–	
		Tropsch process?	[2]	
1	o) Coal	gasification make use of surface and underground gasifiers.		
	i.	Describe the principles behind entrained flow reactors surface		
		gasifiers.	[5]	
	ii.	Describe the principles behind controlled retraction injection po	oint	
		(CRIP) from oil technology underground gasifiers.	[5]	
(	c) Briefly describe the operation of a heat pump. Give two examples of			
	pump	OS.	[5]	

Page 2 of 3

QUESTION 4				
<ul><li>With the aid of schematic diagrams, explain the principle behind the following</li><li>a) Steam turbines</li><li>b) Combined heat and power systems</li></ul>	ng units [12] [13]			
b) Combined heat and power systems	[13]			
QUESTION 5				
<ul><li>a) Coal produced at Hwange colliery mine is classified into high and low ra</li><li>i. Distinguish high rank coals from low rank coals.</li></ul>	nks. [6]			
ii. Give <b>two</b> examples <b>each</b> of low and high rank coals	[4]			
iii. With respect to coal what do you understand by the term coal fusion				
temperature?	[1]			
iv. Define wethearability index and grindability index as applied to coa				
	[2]			
b) Coal tar is a byproduct of coal gasification. It is subjected to fractional distillation to produce useful chemicals.				
i. Identify any <b>five</b> products of coal tar fractional distillation and <b>one</b>	use of			
each.	[10]			
ii. What is meant by <i>allothermal</i> and <i>autothermal</i> processes during cogasification?	oal [2]
